

Release notes

Purpose and features

MOV2MXF quickly converts QuickTime MOV (movie) files containing streams in popular broadcast formats (XDCAM, DV, ProRes, etc.) to corresponding MXF files. It is not a transcoder, instead it remuxes the audio and video content from a MOV to MXF container.

Available for Windows and macOS, MOV2MXF is two programs in one: a user-friendly graphical app and a command line / console tool. It is powered by the nablen MXF SDK, and is the latest in a comprehensive suite of MXF tools from nablen. Like the SDK, the new converter supports a wide variety of popular standards and formats, updated frequently to meet industry requirements.

Supported video formats

Apple ProRes

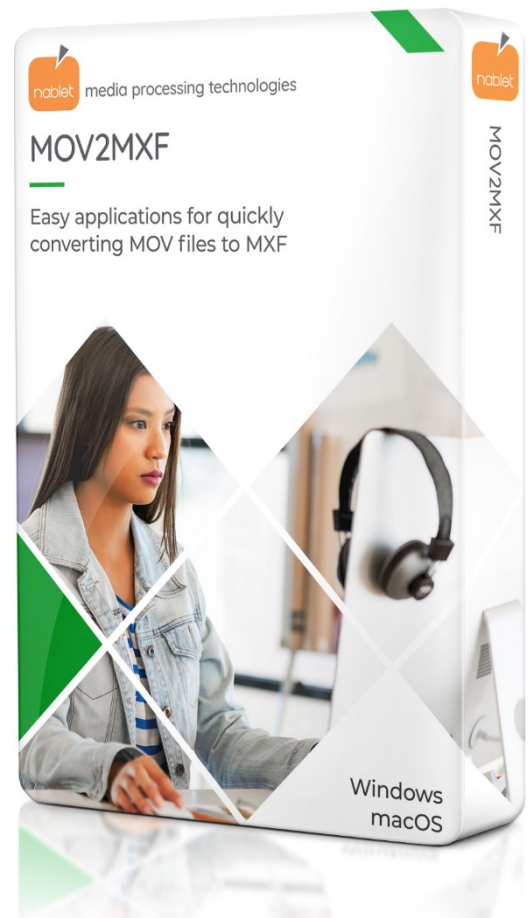

- apco
- apcs
- apcn
- apch
- ap4h
- ap4x

Avid VC-3

- AVdn
- AVC-I (AVC-Intra)

- xd54
- xd5d
- xd55
- xd5e
- xd5l

- xd5f
- xd5a
- xd5c
- xd59
- xd5b

XDCAM HD 4:2:0 35mbps

- xdv6
- xdv7
- xdv8
- xdv3
- xdv2

XDCAM EX

- xdv4
- xdvd
- xdv5
- xdve
- xdv1
- xdvf
- xdva
- xdvc
- xdv9
- xdvb

XDCAM IMX

- mx5p
- mx5n
- mx4p
- mx4n
- mx3p
- mx3n

HDV

- hdv1
- hdv2
- hdv3

- hdv4
- hdv5
- hdv6
- hdv7
- hdv8
- hdv9
- hdva

DVCPROHD

- dvhq
- dvhp
- dvh5
- dvh6

- dvpp
- dvpn

DV25

- dvcp
- dvc

AVC-Intra 50

- ai5q
- ai5p
- ai52
- ai53
- ai55
- ai56

AVC-Intra 100

- ailq
- ailp

- ai12
- ai13
- ai15
- ai16

Supported audio formats

- in24
- sowt
- lpcm
- twos

Supported closed caption format

- c608

Using a license file

To unlock the GUI version it is necessary to use the “Import a registration key” function in the Help menu, open the license file and restart the application.

For the command line / console version (mov2mxfc) it is necessary to put the license file in the same folder where the mov2mxfc executable is located.
